

Treatment Fees
Oocyte Donation with Gestational Surrogacy

Oocyte donation with gestational surrogacy treatment fee structure at Nova IVF was designed to maximize the affordability of this treatment and, hopefully, maximize the probability of your successful outcome.

Having more than one cycle of gestational surrogacy with egg donation significantly increases the likelihood of a successful outcome. With two to four treatment cycles your cumulative live birth probability should be between 80% and 95%.

Nova IVF fees are very competitive and contain no hidden costs i.e., facility fees, anesthesia fees, room fees, processing fees etc. We hope that our treatment plans will provide you with the broadest financial options and will emphasize our commitment to a shared goal: a baby for you!

Gestational Surrogacy with Oocyte Donation Treatment Fees

Table with 8 columns: Treatment, Donor Age, Treatment Fee*, Anesthesia and Procedure Room Fees, Freezing and Storage of Embryos, Frozen Embryo Transfer(s), Assisted Hatching, Hidden Costs. Rows include One Cycle, Two Cycle Plan, Three Cycle Plan, and Four Cycle Plan with sub-rows for donor age groups.

* The treatment fee does not include the cost of pre-treatment evaluation and the state-mandated prerequisites. The above fees also do not include possible costs associated with obtaining an egg donor or a surrogate.

Egg donor's age at the commencement of medication (FSH) to stimulate production of eggs in the first cycle is used to determine the cost of multiple cycle treatments.

One Cycle Fee

Services covered in the one cycle fee:

- All in-cycle office visits, physician ultrasound examinations, estrogen and progesterone determinations and physician clinical monitoring required for oocyte donor's ovarian stimulation and surrogate's embryo transfer
Preparation of surrogate's endometrial lining to receive embryos
One egg retrieval procedure, analgesia, use of procedure room, one embryo transfer and medical consultations related to oocyte donation with gestational surrogacy
Thawing of cryopreserved semen
Preparation of semen sample(s)
Oocyte identification, embryo culture, including possible extended culture to blastocyst and embryo transfer
Serum pregnancy test(s)

Two Cycle Plan

The two cycle plan provides for *up to* two gestational surrogacy with oocyte donation treatments, assisted hatching in the second treatment cycle, embryo cryopreservation (as needed), embryo storage and thawing with subsequent assisted hatching and transfer of any of the cryopreserved embryos.

Your donor must have normal reproductive hormone assay result to qualify for the two cycle plan. The majority of donors will qualify.

Services covered in the two cycle plan:

- Same as one cycle fee
Plus
- One cryopreservation procedure of extra, non-transferred embryos (as needed)
- Storage, thawing, culture and transfer of any cryopreserved embryos (as many times as needed)
- Assisted hatching of *any* cryopreserved embryo
- Assisted hatching of non-cryopreserved embryos in the second treatment cycle
- Preparation of surrogate's endometrial lining to receive thawed embryos (as many times as needed)

Once *all fresh and* frozen embryos have been transferred, if this treatment did not result in an ongoing pregnancy, you will receive a second cycle of gestational surrogacy with egg donation treatment with the same services as outlined above.

Three Cycle Plan

Qualifying criteria and services provided in the three cycle plan:

Same as in the two cycle gestational surrogacy with oocyte donation but once *all fresh and* frozen embryos from the second cycle have been transferred, if there is no ongoing pregnancy, you will receive a third cycle of gestational surrogacy with oocyte donation treatment with the same services as outlined above (including assisted hatching and cryopreservation of extra, non-transferred embryos).

Four Cycle Plan

Qualifying criteria and services provided in the four cycle plan:

Same as in three cycle gestational surrogacy with oocyte donation but once *all fresh and* frozen embryos from the third cycle have been transferred, if there is no ongoing pregnancy, you will receive a fourth cycle of gestational surrogacy with oocyte donation treatment with the same services as outlined above (including assisted hatching and cryopreservation of extra, non-transferred embryos).

Please see additional information on Nova Treatments and Fees page. If you wish, you can request an initial appointment for gestational surrogacy with oocyte donation with one of the Nova physicians.

Fees are subject to change without notice.
